

Summary: Isolation Instructions for People with COVID-19

You have been diagnosed with COVID-19. You must follow these steps to prevent spreading the disease to your family, friends, and others.

1 Isolate yourself

You must stay home until:

- At least 10 days* have passed since your symptoms first started **and**
- You have had no fever for at least 24 hours (without the use of medicine that reduces fevers) **and**
- Your symptoms have improved.

*If you have a weak immune system you might need to stay home for longer than 10 days. Talk to your doctor.

If you never had any symptoms, you must stay home for 10 days after the positive COVID-19 test was taken. But if you develop symptoms, you need to follow the instructions above.

2 Follow the isolation instructions including:

- Stay home except to get medical care
- Do not have any visitors
- Stay away from the others in your home. If you must be in the same room, wear a face covering and try to stay at least 6 feet away, especially from those at higher risk of severe illness
- If you must be in a shared space, open windows when possible
- Use a separate bathroom or disinfect a shared bathroom after each use
- Do not make or serve food to others
- Cover your coughs and sneezes
- Wash your hands often with soap and water for at least 20 seconds. Or, use hand sanitizer with at least 60% alcohol
- Disinfect any surfaces you touch a lot
- Contact your doctor if your symptoms get worse or concern you
- Call 9-1-1 if you have emergency signs. These include trouble breathing, pressure or pain in chest, bluish lips, confusion, hard to wake

Follow the full Isolation instructions. Ask your doctor for a copy, scan the QR code, or visit ph.lacounty.gov/covidisolation.

Please help slow the spread of COVID-19 by talking to Public Health. If you get a call from “LA PublicHealth” or 1-833-641-0305, please take the call. If you receive a Health Officer Isolation Order and have not already completed a contact tracing interview, please call the number on the Order.

3 Tell your close contacts they have been exposed

Tell all your close contacts that they could be infected and must quarantine unless they are exempt*. They must monitor their health and take extra steps to protect themselves for 14 days after they last had contact with you. They must follow all instructions even if they feel well or are fully vaccinated.

A “close contact” is any person who was exposed to you while you were infectious (from 2 days before your symptoms first started until your home isolation ends). This includes:

- Anyone who was within 6 feet of you for a total of 15 minutes or more over a 24-hour period
- Anyone who had unprotected contact with your body fluids and/or secretions. For example, you coughed or sneezed on them, you shared a drinking cup or eating utensils, you kissed, or they cared for you without wearing the right protective equipment.

Close contacts should follow the *Quarantine and Other Instructions for Close Contacts* instructions. To view, scan the QR code, or visit ph.lacounty.gov/covidquarantine.

*You don’t need to quarantine if you are fully vaccinated or recently recovered from COVID-19 as long as you have no symptoms. Monitor your health, wear a mask (including at home), and take extra precautions.

Home Isolation Instructions for People with COVID-19 Infection

SUMMARY

In Los Angeles County, if you have COVID-19* you are required to:

- 1 Isolate yourself**, and
- 2 Tell your [close contacts](#) that they need to quarantine** if you have a positive diagnostic viral test, and
- 3 Follow the [Health Officer Isolation Order](#)** along with **the steps below**

*You are considered to have COVID-19, if you have a positive diagnostic viral (swab or saliva) test for COVID-19 and/or a healthcare provider thinks that you have COVID-19.

Note: If you recently had COVID-19 (within the past 90 days) and you now have a new positive diagnostic test for COVID-19 but you don't have symptoms, talk with your doctor to see if you have COVID-19 again.

Please help slow the spread of COVID-19 by answering if you get a call from "LA Public Health" or **1-833-641-0305** (see [Contact Tracing](#)).

If you tested positive but have not gotten a call yet, please call 1-833-540-0473 from 8 AM to 8:30 PM, 7 days a week.

ISOLATE: Stay home

You must stay home and separate yourself from others until your home isolation ends.

- [Stay away](#) from household members.
- Do not go to work, school, or public areas.
- If you must leave home to get essential medical care, drive yourself, if possible. If you cannot drive yourself, keep as much distance as possible between you and the driver and others (e.g. sit in the back seat), leave the windows down, and wear a mask, if possible. If you do not have a mask, wear a cloth face covering (see [below](#)).
- If someone from outside your household is shopping for you, ask them to leave the food and other supplies at your door, if possible. Pick them up after the person has left. If you need help finding free delivery services, social services, essential items like food and medicines call 2-1-1 or visit the Public Health resource webpage ph.lacounty.gov/media/Coronavirus/resources.htm.
- If you are experiencing homelessness or you are unable to safely isolate or quarantine at home, call the COVID Info line 833-540-0473, open daily 8:00am–8:30pm.

Work and school

- If you work or study in a setting where you could have gotten COVID-19 or passed it on to others, please tell your workplace or school so that they can advise others to test and/or quarantine as needed.
- Information about Disability Insurance, Unemployment & Paid Family Leave for people who are unable to work because they, or a family member, need to isolate or quarantine is available on the [California Employment Development Department](#).
- For more information on COVID-19 related work issues, including employee benefits, protections for workers, and resources, view the [Workers' Rights Frequently Asked Question](#)
- You do not need to have a negative test or a letter from Public Health to return to work or school.

When Does My Home Isolation End?

If you had symptoms and tested positive for COVID-19 or if a healthcare provider thinks* that you have COVID-19, you must stay home until:

- At least 10 days** have passed since your symptoms first started **and**
- You have had no fever for at least 24 hours (without the use of medicine that reduces fevers) **and**
- Your symptoms have improved

If you tested positive for COVID-19 but never had any symptoms:

- You must stay home for 10 days after the test was taken, **but**
- If you develop symptoms, you need to follow the instructions above

*If a healthcare provider initially thought your symptoms were due to COVID-19 but they reassessed your diagnosis and concluded that you are not infected, you can stop isolating once 24 hours have passed since you have been fever-free without using fever-reducing medications. However, if you are under quarantine orders (because you are a close contact to a person with COVID-19) you must stay in quarantine.

**If you have a [condition](#) that severely weakens your immune system you might need to stay home for longer than 10 days. Talk to your healthcare provider for more information.

What to do when home isolation ends

- When [your home isolation ends](#) (see box above) you can go back to your usual activities, including returning to in person work and/or school.
- Continue to practice physical distancing (stay 6 feet away from others) and to wear a face covering when you are in public settings where other people are present.

QUARANTINE: Tell your close contacts that they need to quarantine

If you have a positive diagnostic (viral) test result for COVID-19 you must notify your close contacts that they could be infected and need to quarantine. Give them the [home quarantine instructions](#). They are available in multiple languages at ph.lacounty.gov/covidquarantine. Your close contacts must quarantine even if they feel well.

Definition of a Close Contact

A “close contact” is any of the following people who were exposed to you while you were infectious*:

- a. Any person who was within 6 feet of you for a total of 15 minutes or more over a 24-hour period
- b. Any person who had unprotected contact with your body fluids and/or secretions. For example, you coughed or sneezed on them, you shared utensils, a cup, or saliva with them, or they cared for you without wearing appropriate protective equipment.

*You are considered to be infectious (you can spread COVID-19 to others) from 2 days before your symptoms first appeared until your home isolation ends. If you tested positive for COVID-19 but never had any symptoms, you are considered to be infectious from 2 days before your test was taken until 10 days after your test.

TAKE CARE OF YOUR HEALTH

For information on caring for children with symptoms of COVID-19, see [Guidance for the Care of Children with Symptoms of COVID-19](#).

Home Care

Most people with COVID-19 have mild illness and can recover at home. Here are steps that you can take to help you get better:

- Rest and drink plenty of fluids
- Take over-the-counter medicine such as acetaminophen (Tylenol®) to reduce fever and pain. Note that children younger than age 2 should not be given any over-the-counter cold medications without first speaking with a doctor.

Seeking Medical Care

Stay in touch with your doctor and seek medical care if your symptoms get worse. If you are age 65 years or older or have an [underlying medical condition](#) it is especially important to call your doctor as you may be at a higher risk of serious illness.

Call 911 if there are emergency warning signs

People with emergency warning signs should call 911. If it's not urgent, call your doctor before visiting. You may be able to get advice by phone.

Dealing with Stress

COVID-19 and self-isolation is stressful for people. Visit the Los Angeles County Department of Mental Health's [COVID-19 webpage](#) and the 211LA webpage 211la.org/resources/subcategory/mental-health for local resources to address mental health & wellbeing needs and concerns. In addition, guidance and resources, including information on crisis hotlines, are also available on the CDC webpage [Coping with stress](#).

LA County residents have free access to [Headspace Plus](#). This is a collection of mindfulness and meditation resources in English and Spanish, as well as movement and sleep exercises to help manage stress, fear, and anxiety related to COVID-19.

If you need to speak with someone about your mental health, contact your doctor or the Los Angeles County Department of Mental Health Access Center 24/7 Helpline at 1-800-854-7771. If you need help finding healthcare, call the Los Angeles County Information line at 2-1-1. This number is available 24/7.

PROTECT OTHERS

Follow the steps below to help prevent the disease from spreading to others in your home and your community.

Separate yourself from others in your home

- If you need to be in the same room as other people, set it up so that you can stay 6 feet apart if possible. It is important to stay away from people who are at [higher risk of serious illness](#).

- Use a separate bathroom. If this is not possible, disinfect the bathroom after use (see cleaning information [below](#)).
- Open windows or use a fan or an air conditioner in shared spaces in the home.
- Do not allow non-essential visitors.
- Do not handle pets or other animals.

Anyone who continues to be in close contact with you will need to stay in quarantine for longer (see [home quarantine instructions](#)).

Wear a facemask or cloth face cover when you are around others

- Wear a disposable facemask when you are around other people. If you do not have a facemask, wear a cloth face cover. Do not use either if you have trouble breathing, or are unable to remove it without help, or you have been told not to wear one by a medical provider.
- If you are not able to wear a facemask or face cover, then people who live with you should avoid being in the same room with you. If they must enter the room you are in, they should wear a facemask (or if they don't have one, a cloth face covering). After leaving the room, they should immediately clean their hands, then remove and dispose of their facemask, and clean their hands again.
- *Use masks and face coverings with caution with children.* Infants and children under 2 should not wear cloth face coverings. Those between the ages of 2 and 8 should use them under adult supervision to ensure that the child can breathe safely and avoid choking or suffocation.
- See *Guidance for Cloth Facing Coverings* for more information.

Cover your coughs and sneezes

- Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can after each use. Wash your hands or use hand sanitizer after you cough or sneeze.

Avoid sharing food or personal household items

- Do not prepare or serve food to others.
- Do not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home.
- Make sure to wash your dishes, drinking glasses, and eating utensils with soap and water after each use.

Clean your hands often

- Wash your hands often, especially after blowing your nose, coughing, or sneezing; going to the bathroom; before eating or preparing food; and after touching your face mask or cover. Use soap and water for at least 20 seconds.
- If soap and water are not available, clean your hands with a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands and rub hands together for 30 seconds until they feel dry. Use soap and water if your hands are visibly dirty.

Clean and disinfect all “high-touch” surfaces every day

- Clean and disinfect high-touch surfaces e.g. counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets, and bedside tables.
- Clean and disinfect any surfaces that may have body fluids on them.
- Use household cleaning and disinfectant sprays or wipes. Be sure to follow the product label instructions.
- If caregivers and household contacts clean or come into contact with your body fluids or secretions (such as sweat, saliva, sputum, nasal mucus, vomit, urine, or diarrhea) they should wear a disposable facemask and gloves. After cleaning, they should remove and dispose of their gloves first, clean their hands, then remove and dispose of their facemask, and clean their hands again.

See cleaning instructions in [Preventing the spread of respiratory illness in the home](#) and [FAQs for Caregivers](#).

TALK TO PUBLIC HEALTH - Contact Tracing

Contact tracing is a simple, confidential process that is being used to help slow the spread of COVID-19.

- If you test positive for COVID-19, you will receive a call from a public health specialist. Please do your part by taking the call and answering some questions about the places you have been and the people you have been around while you were infectious.
- The people you tell the specialist about will be contacted and asked to stay home to help prevent others from getting sick. They will not be told your name or contact information. The specialist will also answer any questions you may have and share information about services. If you tested positive but have not gotten a call yet please call **1-833-540-0473** from 8 AM to 8:30 PM, 7 days a week.
- To learn more about contact tracing, click [here](#).

MORE INFORMATION

- For more information on COVID-19 and to view the resources mentioned above in multiple languages, visit ph.lacounty.gov/media/coronavirus/.
- For help finding free delivery services, social services, essential items like food and medicines, visit ph.lacounty.gov/media/Coronavirus/resources.htm or call 2-1-1 (which is available 24/7).
- Please call your health care provider for any questions related to your health. If you need help finding a health care provider, call 2-1-1.
